EDUCATION

Bachelor of Engineering in Computer Science

Aug 2022 – Present

Chandigarh University, Mohali, Punjab

Senior Secondary (Intermediate) (ICSE)

April 2021

Holy Cross School, Agartala, Tripura

Secondary School (Matricualtion) (ICSE)

June 2019

Holy Cross School, Agartala, Tripura

EXPERIENCE

Artificial Intelligence & Machine Learning (Remote)

May – June 2025

Intel® Unnati Lab (Data Centric Labs in Emerging Technologies)

- Built a TensorFlow-based CNN model for automated rice grain classification with high accuracy.
- Applied image preprocessing & augmentation to boost model performance and generalization.
- Integrated Dropout & L2 regularization to reduce overfitting in deep learning pipeline.
- Evaluated the model using accuracy/loss curves and improved overall prediction reliability.

PROJECTS

TaskFlow – Team Task Management Web Application (MERN)

- Developed RESTful APIs for task and user management using Node.js and Express.
- Tested and debugged API endpoints using Postman.
- Identified and resolved backend issues related to authentication and database operations.
- Worked with MongoDB to analyze and manage application data efficiently.
- Deployed the application on Railway with live access: [click here](#)

Sorting Visualizer (HTML5, CSS3, JavaScript)

- Developed a console-based sorting visualizer in C++ to animate Bubble Sort using ASCII bars.
- Utilized `system("cls")`, delays, and step-by-step rendering for real-time visualization of sorting steps.
- Enhanced understanding of sorting algorithms and algorithmic thinking through practical implementation.

CryptoTracker – Cryptocurrency Tracking Web Application (React.js, JavaScript, REST API, HTML, CSS)

- Developed a responsive cryptocurrency tracking web application using React.js and JavaScript to display real-time market data, coin prices, and trends through API integration.
- Implemented dynamic search, filtering, and live data rendering features to help users monitor cryptocurrency performance efficiently with an interactive user interface.
- Integrated external crypto APIs for fetching real-time coin statistics, market capitalization, and price fluctuations, improving understanding of API handling and asynchronous data fetching.

TECHNICAL SKILLS

Languages: Java, C/C++, Python, SQL, JavaScript

Frontend Development: HTML5, CSS3

Developer Tools: Git/GitHub & Version Control, Power BI, IntelliJ IDEA, Debugging.

AI & Prompt Engineering: ChatGPT, Claude, Gemini, Perplexity, Copilot, DeepSeek, Blackbox and other AI tools.

Databases: MySQL, Relational Databases (RDBMS) | Node.js, Express.js, MongoDB (Beginner level)

Others: Data Structures and Algorithms (DSA), Object-Oriented Programming (OOP), Operating Systems (OS), Database Management Systems (DBMS), Computer Networks (CN), Cloud Computing.

Interpersonal Skills: Communication Skills, Team Collaboration, Problem Solving, Leadership, Time Management

ACHIEVEMENTS

- Published research papers in IEEE(Scopus indexed) and available at Google Scholar in the field of AI-ML(DL).
- Solved more than 400 problems on online platforms like Leetcode, Codechef, HackerRank and Coding Ninja.
